BROADBAND EQUITY, ACCESS & DEPLOYMENT

A funded initiative of the National Telecommunications and Information Administration (NTIA), a subsection of the US Dept. of Commerce, as part of their Internet For All initiative. The goal is to provide funding to regional and underserved broadband providers. Most funds are distributed to states, who then distribute them in their own regions.

How can ePlus help?

Regulatory Requirements

Our goal is to help our clients untangle the requirements and develop functional, actionable plans to both comply with the requirements of BEAD and to improve their natural security posture. We explain the requirements in plain language and help our customers each step of the way in development, implementation, and reporting.

Proven Expertise

Our team of knowledgeable professionals brings several hundred collective years of experience to Federal and regulatory compliance challenges. With certifications such as CISSP, CISA, CISM, CRISC and others, our consultants can walk you through complex requirements and help devise step-by-step remediations for any discovered gaps.

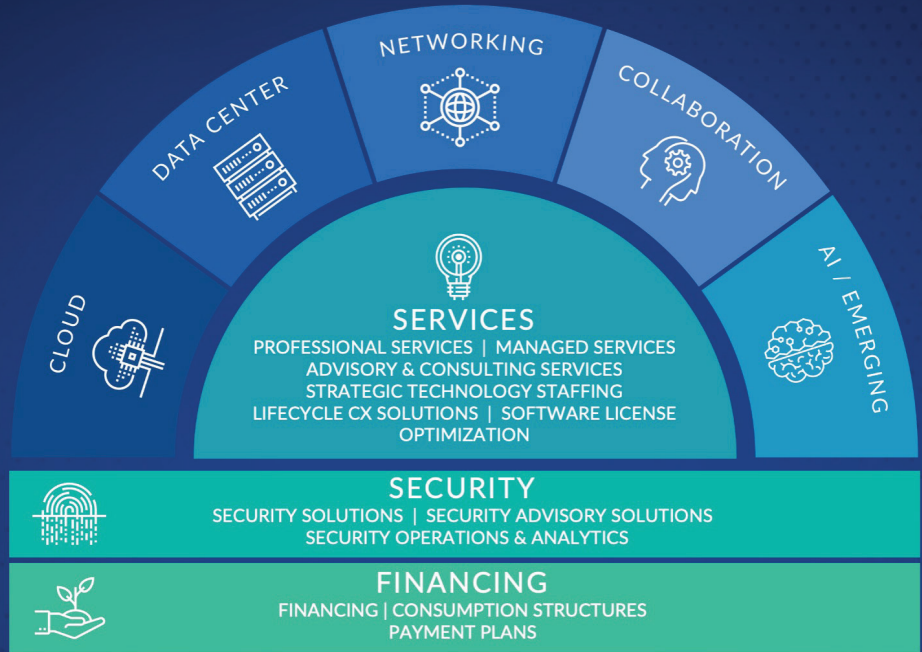

Long-term Partners & Trusted Advisors

Compliance with any Federal process is not a one-and-done process. ePlus can assist in setting up repeatable processes to provide external auditors with the information they will need. Regular penetration tests, vulnerability scans, and tests of business continuity and incident response plans are key to both regulatory compliance – and general preparedness.

Comprehensive Solutions and Services

With a relentless commitment to innovation on behalf of everyone we serve, ePlus helps organizations secure, modernize, optimize and scale their IT infrastructure for truly transformational results. We achieve these outcomes via excellence across our innovative portfolio of solutions and services. It's equal parts strategy, execution and results, always with our customers at the core. Each day. Every day.
