

Security Services

Safeguard Your Business and Secure Your Competitive Edge.

- + *Implement higher standards of IT security and protect your valuable information assets.*
- + *Benefit from best-of-breed solutions and experienced, certified security professionals.*
- + *Gain peace of mind through 24/7 services and support you can trust.*
- + *Utilize a solution developed specifically to address your security risk and requirements.*

Information assets—including your organization’s intellectual property, data, and business processes—are critical to your success. But protecting them is more challenging than ever before. The threat from hackers, viruses, and data theft is a growing challenge for public and private sector organizations alike.

Security Solutions from a Trusted Integrator

By partnering with ePlus®, you’ll be able to leverage security solutions from multiple providers and find the best fit to protect your organization most effectively. As an experienced integrator of security solutions, we back our best-of-breed offerings with a team of seasoned, certified experts. Available on a 24/7 basis, our security resources provide round-the-clock services and support.

Tailored Solutions, Proven Results

ePlus offers expert consultative services to define your security needs thoroughly and accurately. After a careful analysis of your requirements, assessed risk, network exposure, and other key criteria, our experts will develop a security solution tailored to your organization. With ePlus, you’ll have the confidence and peace of mind that your information assets are in good hands, so you can maintain your focus where it counts—on your core business.

ePlus provides security services and solutions to leading organizations in a variety of markets. Our customers include Fortune 500 companies, high-technology businesses, service providers, systems integrators, schools, and government agencies. The knowledge and experience we have gained working with these world-class organizations enhances our ability to meet your security needs.

- RISK ASSESSMENTS
- INFRASTRUCTURE PROTECTION
- UTILIZATION & ANALYSIS
- EDUCATION & TRAINING
- SECURITY MANAGEMENT & MONITORING
- INCIDENT RESPONSE
- SUPPORT

A Full Line of Security Services for Unparalleled Protection

Risk Assessments

Successful security programs require ongoing risk evaluation and management. Our risk assessment offerings allow you to identify critical information and business processes; detect your susceptibility to loss, manipulation, theft, malicious intent, and natural disaster; and determine the potential impact. Services include:

- **Enterprise Assessments** are custom designed and highly-targeted to focus on your specific security objectives.
- **Wireless Assessments** analyze your infrastructure for the presence of any

wireless networks and identify possible security breaches.

- **Vulnerability Assessments** provide information to minimize risks and ensure continuous improvement of your security posture.
- **Penetration Testing** assesses the effectiveness of your existing security procedures and technologies as well as your ability to detect and respond to specific security events.
- **Security Policy Reviews** provide high-level guidelines for securing your data, resources, and reputation through a combination of management, procedural, and technical controls.
- **Benchmarking and Gap Analysis** let you gauge your overall security performance against industry best practices and accepted standards (including ISO 17799/BS7799, HIPAA, and GLBA).

Infrastructure Protection

A well-designed security program will protect your infrastructure with perimeter security, access control, authentication, data integrity and confidentiality, and anomaly detection. We offer Security Program Development services that provide a quick and efficient way to design, implement, and practice a new or enhanced security program. Our analysis, design, and infrastructure tools include infrastructure and wireless defense suites, access control and VPN, firewalls, intrusion detection systems, Internet content filtering, anti-virus solutions, and load balancing from market leaders like Cisco, Symantec, and Check Point.

Utilization and Analysis

ePlus provides the tools and resources to help you understand your current security resources and determine how to cost-effectively scale them for future growth. Through general and standardized reports, ePlus delivers in-depth analysis of your security utilization to help you prepare for future needs and closely manage your business security objectives and risks.

Education and Training

ePlus offers a range of courses that teach the knowledge and know-how necessary for the

success of your security program. Product training includes Check Point CCSA, Check Point CCSE, and Check Point CCSE Plus. We also offer information security awareness classes that provide an overview of key security concepts and methodologies—from both management and technical perspectives. And we can tailor our training classes to suit your individual needs.

Security Management and Monitoring

We offer remote device management through our Network Operations Center (NOC), including Check Point, Cisco, and Nokia/Check Point firewalls. Our NOC takes responsibility for OS updates, bug fixes and patches, and changes made to devices (user rights, access rights, and passwords). We also offer iSentry intrusion detection monitoring and management and iSecure firewall monitoring and management services.

Incident Response

As part of a complete security solution, ePlus helps you develop an internal team of experts to identify, handle, and respond to information security incidents. Our consultants help you develop a Computer Security Incident Response Team (CSIRT) to manage each phase of incident response, including preparation and planning, notification, incident classification, handling, and aftermath.

Support

ePlus offers a variety of security support services, from remote monitoring and management to employee training. Our experienced support professionals hold a wide variety of security product and best practice certifications, including the Certified Information Systems Security Professional (CISSP) given by ISC2, Cisco Certified Infrastructure Engineer (CCIE), National Security Agency Information Assessment Methodologist (NSA IAM), Check Point Certified Security Expert (CCSE), and others. Our support services let you leverage this wealth of expertise to keep your organization running smoothly, efficiently, and securely. Services include help desk support, Check Point support, staff and skills augmentation, and security consulting.
