

ePlus Managed Security Services

Where Technology Means More®

WE BELIEVE SECURITY IS A BRAND ISSUE

It affects top-line revenue.
In every organization.
Of every size and industry.

And IT security challenges are growing on a daily basis...

Increasing threat landscape

Inconsistent management and support of security technology and resources

Cloud and mobility stretching the perimeter to its limit

Valuable data in endpoints, storage, servers and the cloud

Our customers tell us they are facing:

- + **Increased board demands** for greater security value for the investment
- + A shortage of **cybersecurity talent**
- + A myriad of **federal, state and local** cybersecurity regulations
- + An **inability to forecast** their security needs appropriately

Optimize the Security Program

- **Assess**
Effectively assess your security environment
- **Protect**
Plan and efficiently operate security controls to continuously protect
- **Comply**
Meet regulatory compliance
- **Simplify**
With 24x7x365 managed support

Security Log Monitoring

+ Challenge

- Detect anomalies within log files, creating alerts automatically, further verified for further action. Use information for business intelligence
- PCI DSS, HIPAA, SOX regulations and others require log monitoring
- Burden on internal teams to monitor 24/7 causes gaps or no monitoring

+ Key Value

- 24/7 advanced threat detection
- Analysis and validation by certified security experts
- SERT threat intelligence
- Enables regulatory compliance
- Protects applications and servers, lowers operational cost

Security Log Management

+ Challenge

- Retaining logs and keeping them secure from manipulation requires true separation of duties, robust controls and dedicated IT staff
- Compliance mandates such as PCI DSS, SOX, GLBA, HIPAA and others require organizations to monitor and retain logs

+ Key Value

- True cloud-based solution
- Forensically sound
- Accessible and on demand
- Protects applications and servers, lowers operational cost

Vulnerability Management

+ Challenge

- Efficiently track and manage the remediation process of a large number of vulnerabilities that result from scanning
- Tools and reports that enable management of large datasets and fit client's remediation process
- Finding tools that save time, easing the process and enhancing scanning

+ Key Value

- Easier to manage – tools enable bulk data management and simple rules
- Eliminates rework – features like auto-clean, dispositions and exceptions eliminate costly and timely rework
- Threat correlation – automatically correlates vulnerability data with security monitoring to enhance the risk evaluation process

Fully Managed SOC/NOC Services

+ Challenge

- Detect and remediate anomalies. Use for information for business intelligence to provide a proactive approach to security
- Maintain continuous compliance against your security frameworks
- Work collaboratively your business and auditors to understand compliance objectives and associated deliverables
- Alleviate burden on IT teams to carry full security responsibility

+ Key Value

- 24/7/365 fully managed service for security, networking and infrastructure
- Monitoring and remediation services via certified engineers that provide actionable intelligence for informed decision making
- Increases operational efficiency and improves security posture
