

Cisco Unified Branch

e+
Where Technology
Means More®

AI-Ready by Design

The Way We Work is Evolving

The branch is evolving from a service touchpoint into a critical hub for digital experiences and customer engagement. Branches taking on this strategic role has created more complexity, increased security threats and created performance bottlenecks that IT teams are finding difficult to handle.

Business agility continues to complicate networking...

Of the global workforce continue to work from anywhere¹

Of employees hop between six networks on a weekly basis²

Of companies admit their employees are using unmanaged devices to access company platforms³

Of network problems stem from misconfiguration and change management errors⁴

Of IT teams experience a lack of visibility into complete network paths⁵

Of IT leaders say that outdated infrastructure is impacting growth⁶

...While people remain the weak point in security strategies...

Of breaches are caused by human error⁷

Of organizations have fallen victim to an AI-automated phishing attack⁸

Of businesses feel ready to capture AI's potential today⁹

Of IT leaders see modernized networks as critical to deploying AI, IoT and cloud¹⁰

Modernize and Secure the Network for Future-Proofed Workplaces

Cisco Unified Branch, built on the AI-Ready Secure Network Architecture, addresses the toughest branch challenges: rapid deployment, secure connectivity to applications anywhere and consistently great customer experiences – all with radically simplified operations powered by AgenticOps.

Cisco uniquely combines networking, security, smart building technology and collaboration to power everywhere people work and serve customers.

Drastically simplify operations by resolving issues in minutes with AgenticOps

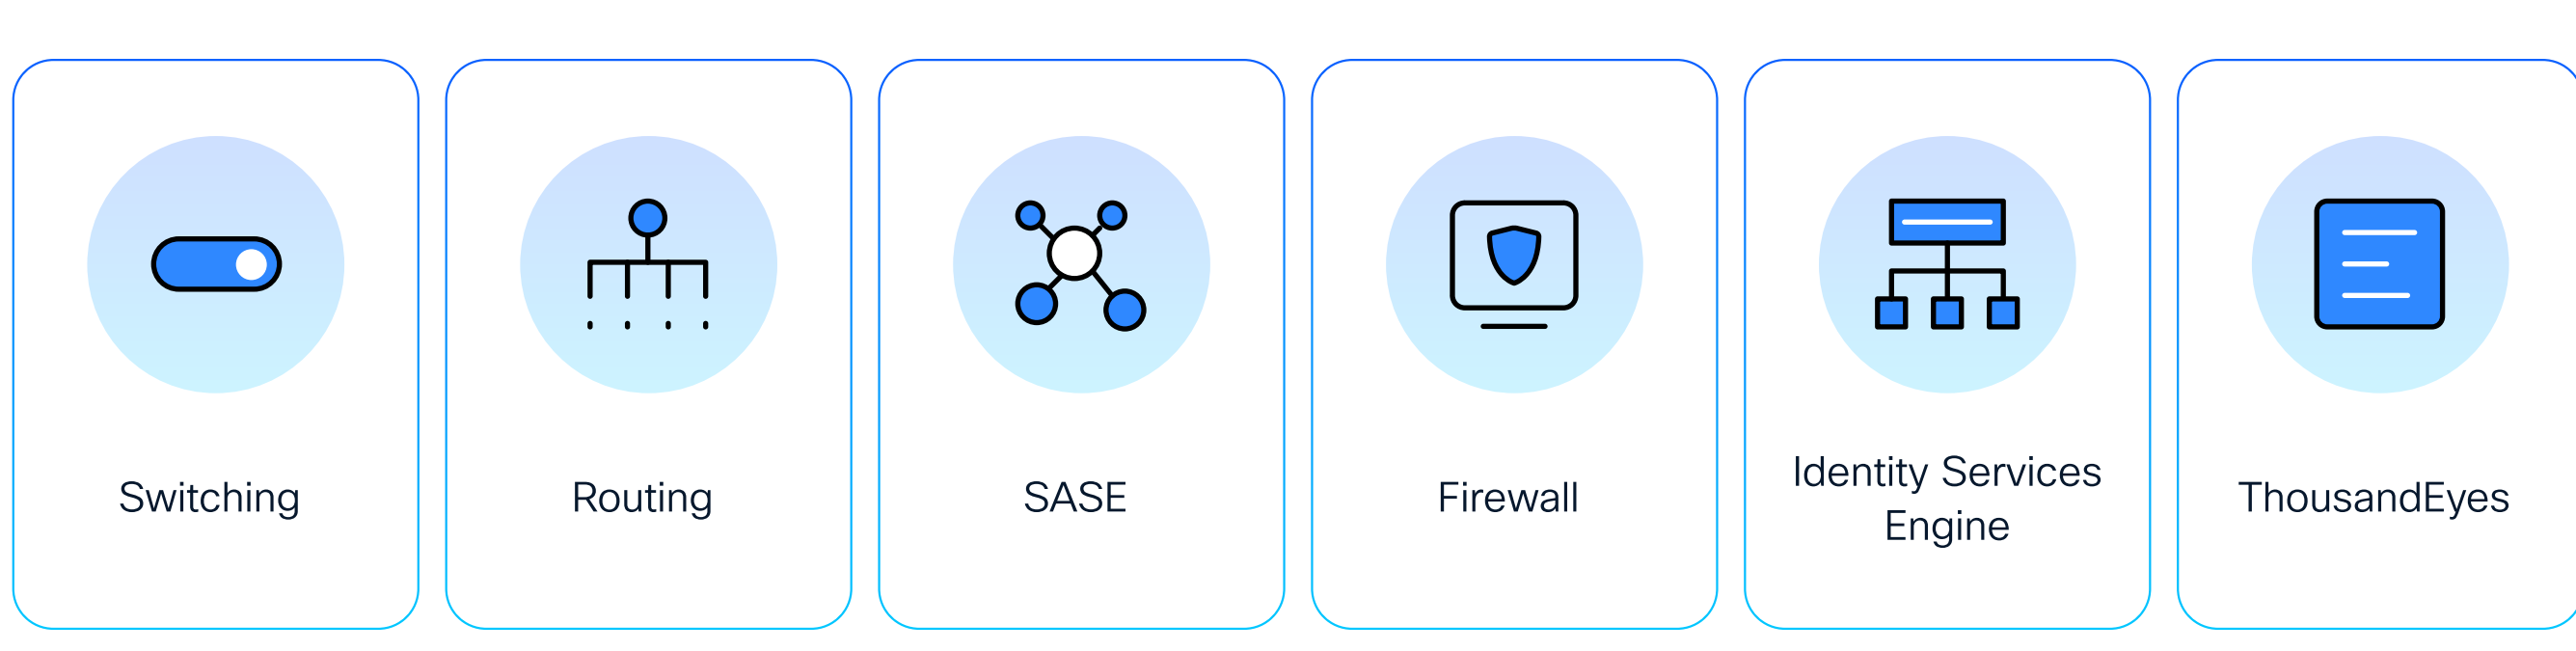

Block emerging threats and stop their spread with security fused into the network

Ensure high performance for demanding apps and AI workloads with scalable AI infrastructure

The Cisco AI-Ready Secure Network Architecture

This Allows You to...

Improve user experience

Proactively and dynamically route critical applications over optimal network paths

Accelerate Branch deployments

Standardize branch rollouts by enabling policy-based control by user, device or application

Secure seamless connectivity

Ensure secure user-to-application access without the need for separate security stacks

Enhance performance at the edge

Deliver high-throughput, low-latency infrastructure with scalable, secure connectivity

Cisco by the Numbers...

40,000

Global customers rely on Cisco SD-WAN solutions

800B

Threats analyzed daily by Cisco Talos threat intelligence team

Ways to Pay

Preserve capital and innovate faster with flexible payment solutions from Cisco Capital

To help you reimagine the branch as an agile, secure and intelligent digital hub, reach out to ePlus Technology, inc.
