

Why unified security is essential for a future-proofed workplace

Simplify your security stack and enhance protection everywhere with Cisco security solutions, managed on a unified platform.

Security complexity creates too much risk

As sophisticated threats proliferate, businesses respond by adding more siloed solutions and increasing their cybersecurity budgets. But that approach isn't sustainable.

of organizations have 10 or more point solutions in their security stack; 25% have 30 or more solutions.

of organizations had a cybersecurity incident in the past 12 months; for a majority, it cost them \$300k or more.

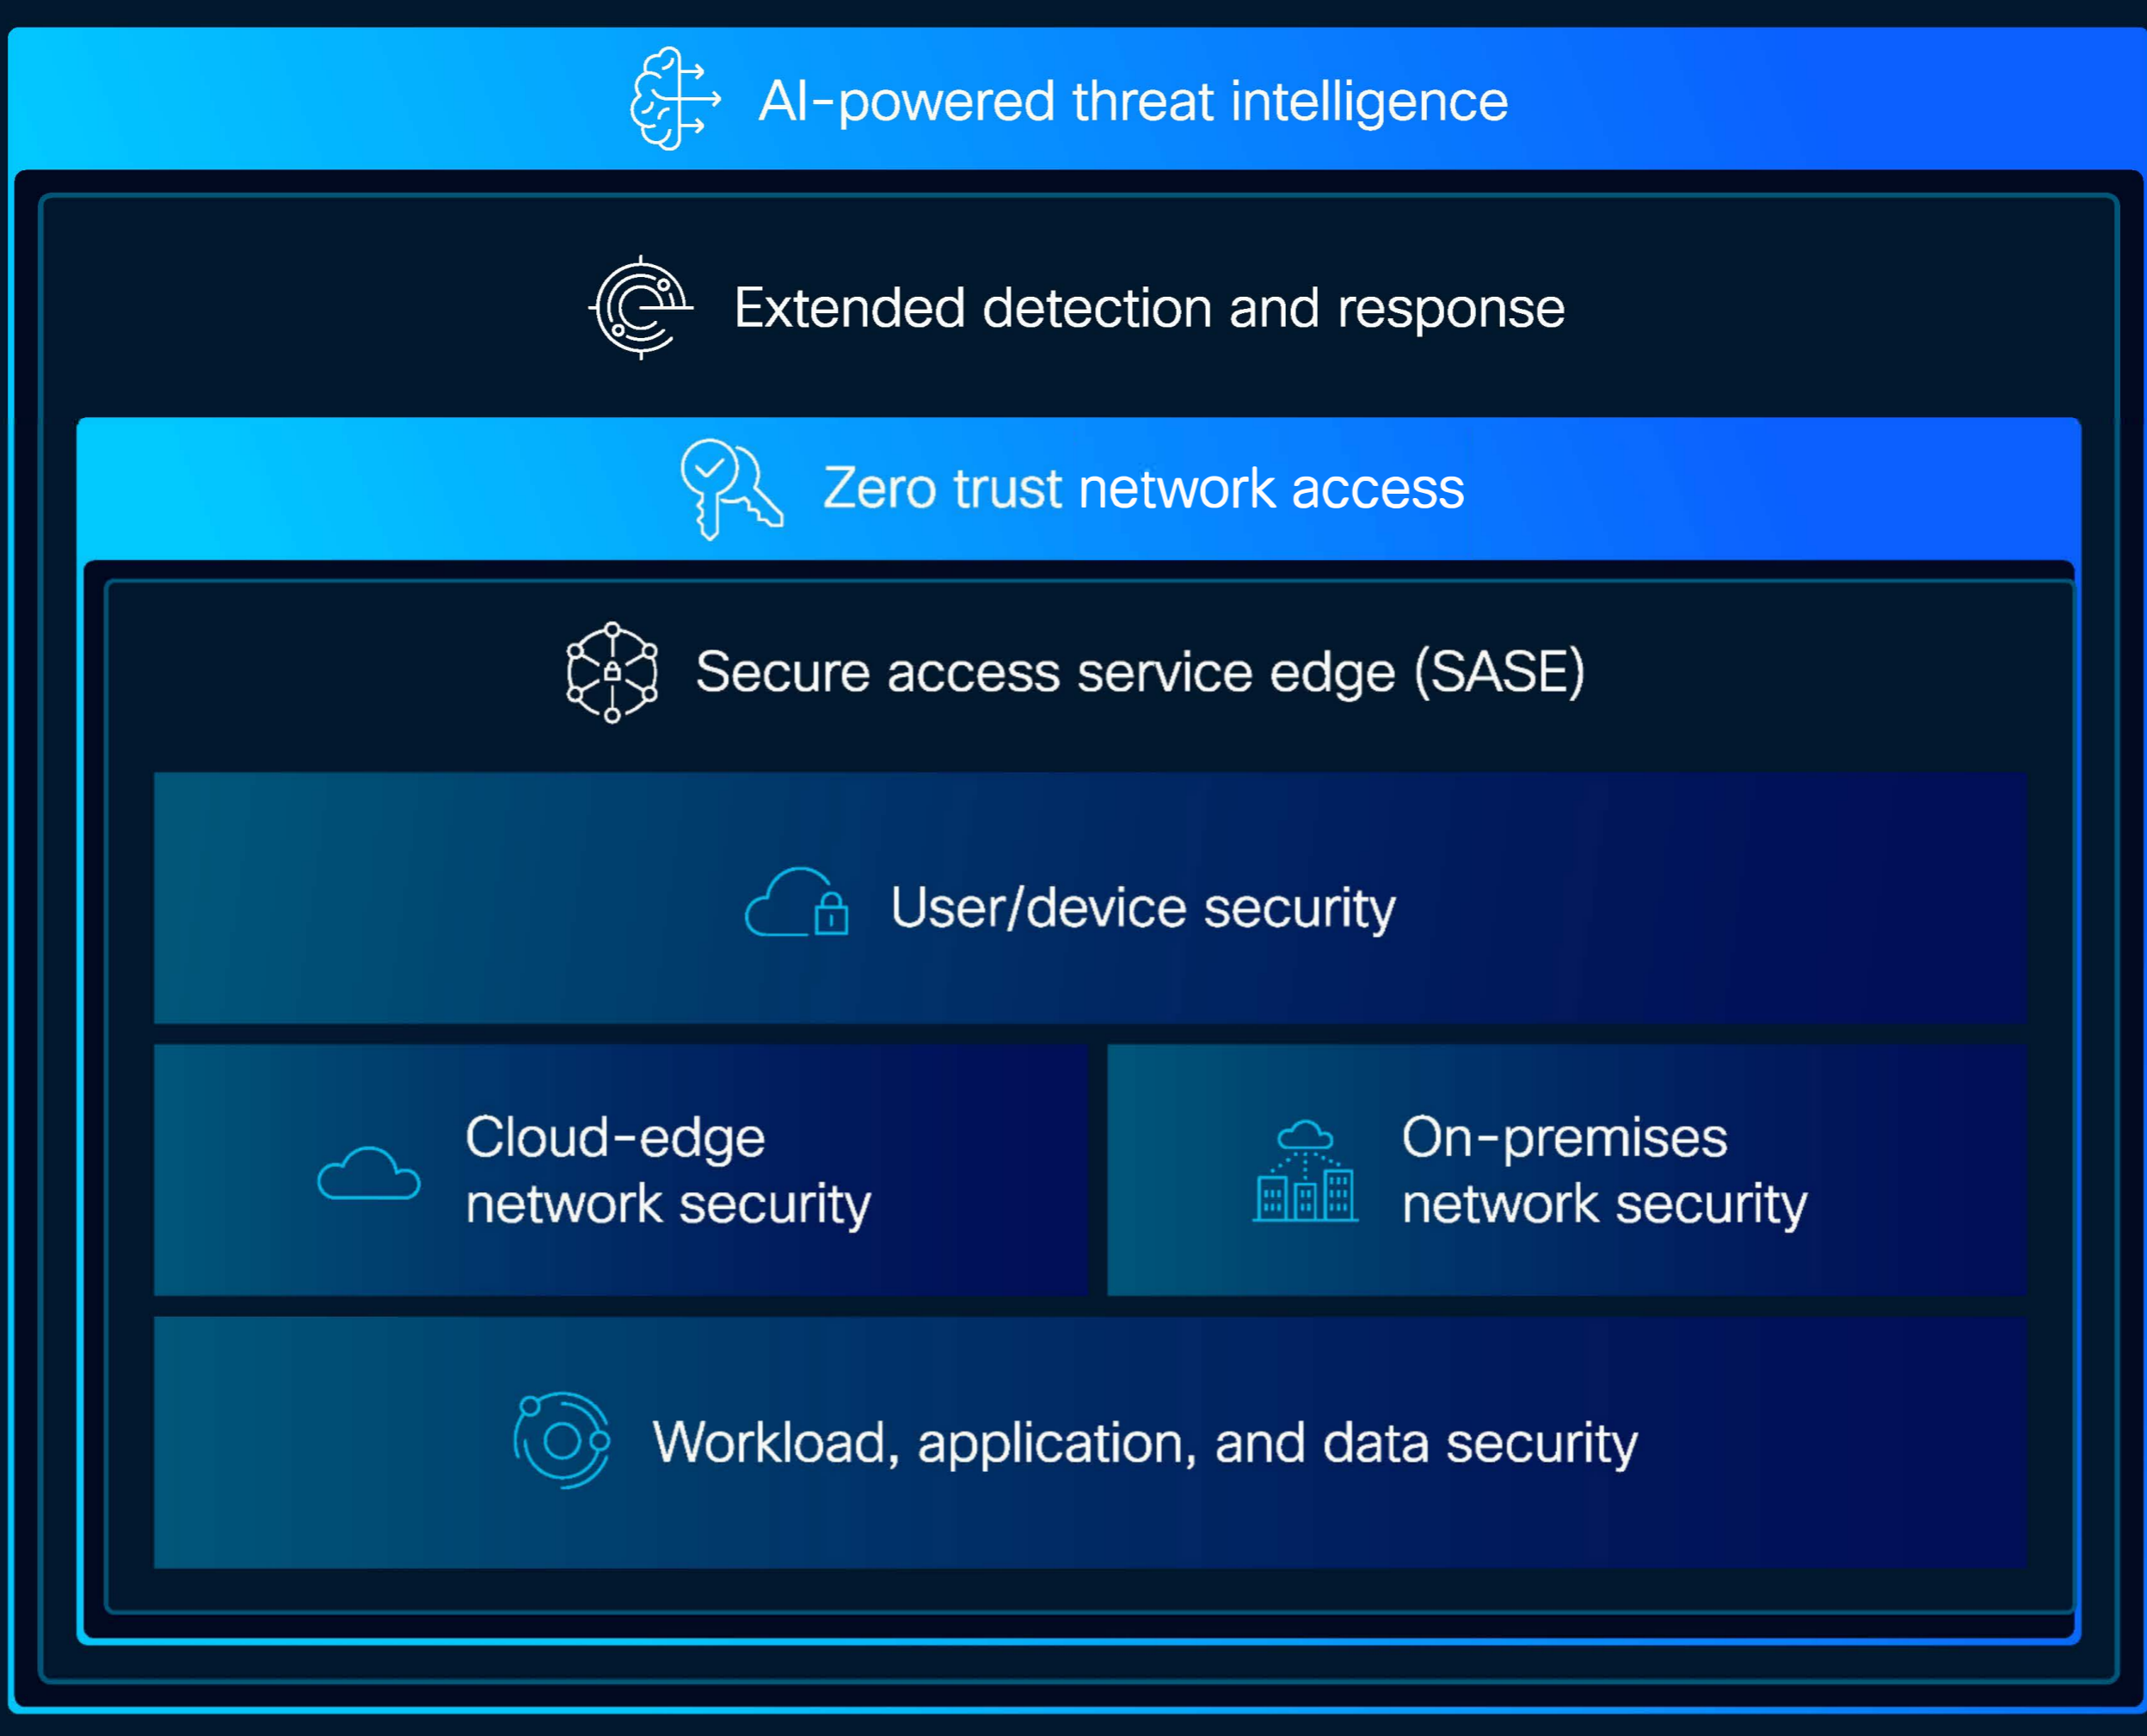

of organizations admit that multiple point solutions slow down their ability to detect and respond to incidents.
