

Keep Your Business Powered with ePlus Managed Power Protection

Monitoring and Management of UPS Systems

Onsite Remediation and Parts Replacement

Portal with Inventory Management and Reporting Capabilities

Continuous power flow is mission critical. Yet this crucial part of the infrastructure is often overlooked due to resource constraints or network complexity. To avoid business downtime, backup power must be proactively managed—especially when uninterruptible power supply (UPS) systems are located in remote sites with limited IT staff.

ePlus offers Managed Power Protection, a managed service that keeps UPS and other critical systems running for maximum uptime and frees your IT team to focus on what matters most: your business.

Benefits:

Hassle-free power protection: Our team monitors and manages your network backup power so you don't have to.

Peace of mind with global visibility: We locate and map your power infrastructure—and give you visibility through an easy-to-use portal.

Continuous uptime via proactive fleet management: ePlus monitors each device to prevent dead batteries, device failure, and other problems—and dispatches certified technicians to fix issues.

Optimized costs: We ensure you have the right amount of backup power to save on energy costs.

One point of contact: Work directly with ePlus for all your power protection needs—no need for multiple contracts with different vendors.

Is ePlus Managed Power Protection for You?

Consider ePlus Managed Power Protection if you:

- ✔ Have experienced downtime in your distributed environment
- ✔ Have UPS devices across multiple locations with limited IT staff or no process for managing them
- ✔ Want to be more proactive about replacing UPS batteries before they die (and stay on top of other maintenance)
- ✔ Acquired assets due to a merger

Stay Focused on Business Outcomes. We'll Keep the Power On.

Back-up power is vital to avoid network downtime. But getting insight into device health, and then repairing and maintaining UPS systems, takes time away from your business—that is, if you can actually locate all the UPS devices in your environment.

Secure, cloud-based ePlus Managed Power Protection provides 24/7 monitoring of remote connected assets, so you can be confident that your business stays connected during storms and other power emergencies.

We Allow You to...

Gain Confidence

Know your devices will stay connected, no matter where they're located.

Stay Ahead of the Curve

Our innovations in power protection help you maximize your IT.

Be Agile

Know right away when your power needs change—and adjust quickly.

Receive a Free UPS Health Assessment!

See how ePlus Managed Power Protection works with a complimentary assessment of your UPS devices—locations, ages, health and more—and identify problems before they happen. [Click here](#) to schedule your free UPS Health Assessment.
