

# The AI-Driven Enterprise Supports Business Continuity and Contact Tracing

Reducing the risk of returning to work with Juniper Mist.

The challenges of bringing employees back to work.

Contact tracing

Limiting facility access to critical employees

Maximum-allowed occupancy monitoring

Social distancing

Large group alerts

## Key questions for the return to work.

- 1. If someone has identified themselves as positive for a virus (or is exhibiting symptoms), with whom did they recently come in contact?
- 2. What areas within the office campus did they visit? How long were they there?
- 3. Are there certain areas on campus (i.e., "hot zones") that are more susceptible to spreading a virus?
- 4. Can proactive actions be taken to prevent unnecessary contact?

## Mission-critical use cases

1

### Hot zone alerting

View historical traffic patterns and dwell times for individuals who have reported testing positive for COVID-19—from the moment they came onsite to their departure.

2

### User journey information

Disperse or divert traffic away from congested areas with real-time, location-based alerting and view trends over time to identify troublesome areas for proactive actions.

3

### Proximity tracing

Quickly identify the proximity of users who have reported testing positive for COVID-19 to other team members.

## Juniper Mist: Reduce potential risk when business reopens.

### Part of a comprehensive business continuity plan.

A unique and powerful solution for promoting personnel and guest safety.

### Enable seamless and cost-effective deployment.

AI-driven analytics, self-driving Wi-Fi, and patented virtual Bluetooth® LE (BLE).

### AI-driven operations and support.

Simplify network operations, automate support, and proactively resolve issues.

### Deliver exceptional user and device experiences.

AI-driven insights and customizable service-level expectations (SLEs) ensure the best user, device, and IoT experiences.

### Evolve as your business evolves.

Natively integrated AI and data science tools meet rapidly changing requirements.

### Defy infrastructure limitations with a microservices cloud.

Build a scalable, agile, and reliable solution with a cloud-first microservices architecture.

ePlus completes the solution with integration, services, and support.

### Professional services

Realize impact and fast ROI from your IT investments.

### Managed services

Move from managing IT to managing business outcomes.

### Strategic technology staffing

Get the skills and people you need when you need them.

### Support services

Fulfill your global IT service needs quickly.

Let's get you back to work together.

Working together, ePlus and Juniper Mist can help protect the health and safety of people reentering the workplace while ensuring ongoing enterprise protection and business resilience. We remove traditional constraints and enable you to deliver automated, secure, and scalable networks to help you along your reopening journey and connect you with the world.

Connect with ePlus to discuss your business continuity and contact tracing challenges and how we can help.
