

FALCONX RECON

Discover threats to your brand, employees and sensitive data across the open, deep and dark web

DIGITAL RISK RECONNAISSANCE ACROSS THE DARK WEB AND BEYOND

CrowdStrike Falcon X™ Recon exposes potentially malicious activity from the open, deep and dark web, enabling organizations to better protect their brand, employees and sensitive data. Falcon X Recon collects data and monitors activity from millions of restricted web pages, criminal forums and encrypted messaging platforms — the hidden recesses of the internet where criminal actors congregate and underground digital economies thrive. By empowering security teams to conduct investigations in real time, they can proactively uncover fraud, data breaches, phishing campaigns and other online threats that target their organization.

KEY CAPABILITIES

COLLECT

Falcon X Recon provides instant access to over eight years of data from difficult-to-access digital channels of the open, deep and dark web. Falcon X Recon proactively collects raw intelligence about fraudulent activity, stolen data, threats to enterprises, and identified exploits and tools in the adversaries' arsenals.

- Collect raw intelligence at scale: Automatically monitor data from millions of hidden web pages
 and thousands of restricted forums, marketplaces, paste sites, IRC channels, rogue apps,
 phishing domains, and open and closed messaging applications like Telegram, QQ and more.
- Perform real-time, covert investigations: Disrupt adversaries with access to real-time raw intelligence, and limit their opportunities to attack. Perform investigations with undetectable access to data from restricted sites. Falcon X Recon stores historical data so adversaries can't cover their tracks by changing or deleting posts.
- Track criminal adversaries: Analyze and track attacker behavioral changes over time, and identify increases in activity, emerging attacks, new targets, and evolving tradecraft and tools, so you can better protect against external threats.

KEY BENEFITS

Provides unrivaled coverage of the open, deep, dark web

Automates the extraction of data from millions of restricted and underground environments

Reduces investigation time and improves efficiency and response

Offers real-time monitoring with rules tailored to your organization

Instant time to value — deploys and is operational in minutes

Includes CrowdStrike's Actor Profiles and IOC feed via portal and API

FALCON X RECON

INVESTIGATE

Gain real-time visibility to potential threats, and accelerate investigations into fraudulent activity targeting your organization. Falcon X Recon eliminates risky guesswork and enriches traditional incident response by providing broader context to improve the depth and breadth of investigative reporting and analysis.

- Identify targeted threats: Continuously monitor underground environments for external threats to the organization without the need for creating complex queries. Falcon X Recon provides easy-to-use wizards that include predefined search criteria, like brand names, executives, domains, vulnerabilities, email addresses and many more. Create and save your own monitoring rules to proactively sift through raw intelligence or share them with your team.
- Expose the adversary: Investigate results displayed in customizable dashboards and easy-to-read cards. Users can view the original threat actor posts with additional context about the actor and the site. Results are viewed in their original language and can be translated from 18 other languages using augmented translation with hacker slang dictionaries.
- Enrich investigations: Gain a complete understanding of the threat. Universal Search enables users to automatically correlate Falcon X Recon results with additional context provided by other licensed CrowdStrike Falcon modules. Maximize efficiency and effectiveness of response by revealing the relationships between digital threats and endpoint detections, hosts, threat intelligence reports, vulnerabilities and much more.

NNTIFY

Optimize the investigation and response workflow with real-time notifications when potential threats are identified. Ensure that the users responsible for triage and response have the details they need at their fingertips.

- Prioritize alerts: Set the priority of the alert based on the criticality of the external threat.
 Immediately pivot from the notification to the details of the alert.
- Gain complete administrative control: Customize how team members are notified and how often they receive alerts. They can be alerted immediately or on a schedule such as daily or weekly. Toggle notifications on or off without affecting the underlying monitoring rule.
- Inform the right team: Go beyond cybersecurity digital threats affect an organization's brand, reputation and employee safety. Alert your departments outside of security, such as marketing, legal, human resources and fraud.

EDITIONS

Falcon X Recon is available in two editions:

- Falcon X Recon Express: Designed for small and medium-sized businesses. Get started performing reconnaissance across the hidden areas of the internet on Day One.
- Falcon X Recon Enterprise: Includes everything in Express, plus:
 - Dynamic ad-hoc search capability for evolving investigations
 - Credit/bank card BIN data
 - CrowdStrike® Intelligence Actor Profiles and IOC feed
 - REST APIs for easy integration into third-party solutions

DIGITAL RISK RECONNAISSANCE

Brand Protection: CrowdStrike Falcon X Recon discovers attackers associated with fraudulent interactions with your brand, including fake social media accounts, domains and mobile apps.

Data Leak Discovery: CrowdStrike Falcon X Recon detects compromised credentials and theft of sensitive data, IP and credit card information from data leaked on the open, deep and dark web.

Supply Chain Monitoring:

CrowdStrike Falcon X Recon helps identify threats to your suppliers by exposing chatter, phishing campaigns, counterfeit websites and more

Executive Protection: CrowdStrike Falcon X Recon monitors threats, impersonations and phishing attempts against VIPs and executives.

ABOUT CROWDSTRIKE

CrowdStrike, a global cybersecurity leader, is redefining security for the cloud era with an endpoint protection platform built from the ground up to stop breaches. The CrowdStrike Falcon® platform's single lightweightagent architecture leverages cloud-scale artificial intelligence (AI) and offers real-time protection and visibility across the enterprise, preventing attacks on endpoints on or off the network. Powered by the proprietary CrowdStrike Threat Graph®, CrowdStrike Falcon correlates over 5 trillion endpointrelated events per week in real time from across the globe, fueling one of the world's most advanced data platforms for security.
