

# SD-WAN Readiness Assessment

## Assessment Description

A successful modern WAN has new requirements around bandwidth and policy. The ePlus SD-WAN Readiness Assessment uses a combination of automated tools and manual inspection to extract critical data points about the operational state of your WAN environment. Armed with this granular empirical data, you can identify your exact network bandwidth requirements and determine how applications behave on your network—to streamline your SD-WAN implementation.

## Why Do It?

- + Identify critical design factors
- + Determine how applications actually perform in your live environment
- + Gather metrics on performance
- + Streamline SD-WAN design and implementation

## What You Get

Our SD-WAN Readiness Assessment delivers:

- + WAN edge device and technology analysis
- + WAN performance analysis
  - + Application behavior
  - + Application classification (QoS)
  - + IP addressing and port
  - + Interface bandwidth and utilization
  - + WAN stability

## Methodology

- + Gather configuration information and perform baseline exercise
- + Deploy automated tools for data collection
- + Extract data for analysis
- + Perform automated and manual data analysis
- + Correlate data collected from multiple sources
