

# Cloud Usage & Risk

## CLOUD USAGE & RISK WORKSHOP

An ePlus Cloud Usage & Risk Workshop will assess your current cloud services, provide education around available security controls for cloud applications, and take the first step in implementing a solution that will better protect your organization's data within shared cloud applications.

Companies are moving more and more of their data to the cloud, utilizing multiple providers. As employees are increasingly mobile and collaborating, there is a growing need for security that governs usage and protects data everywhere.

### SHARED CLOUD APPLICATIONS ARE AT RISK

Visibility into actual usage, activities and threats within cloud applications help companies maintain a strong security posture. Leveraging CASB (Cloud Access Security Broker) technology, the ePlus Cloud Usage and Risk workshop provides companies with critical visibility of applications and the state of their security across one or multiple cloud providers. ePlus helps companies understand online activities, stop threats, and respond to incidents while providing that single point of control—simplifying cloud security management.

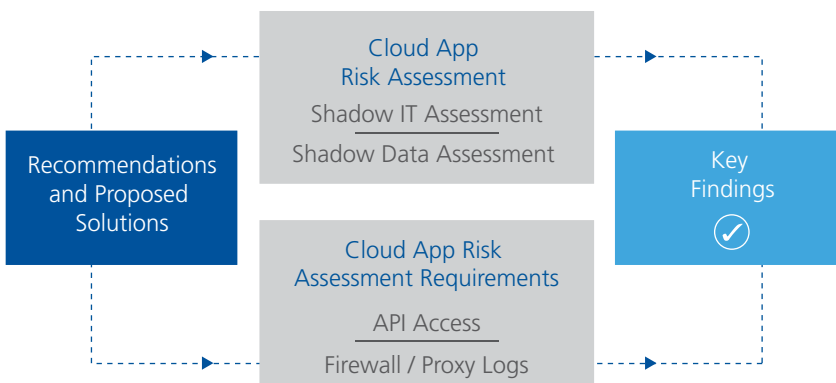

### What does the Workshop look like?

The workshop is an onsite session with your key internal stakeholders. The goal of the workshop is to review your application landscape in order to determine the security controls best suited to provide visibility and protection around how your users interact with cloud-based applications. The workshop typically concludes within four hours, and remote stakeholders are able to join via web conference.

### WORKSHOP AGENDA

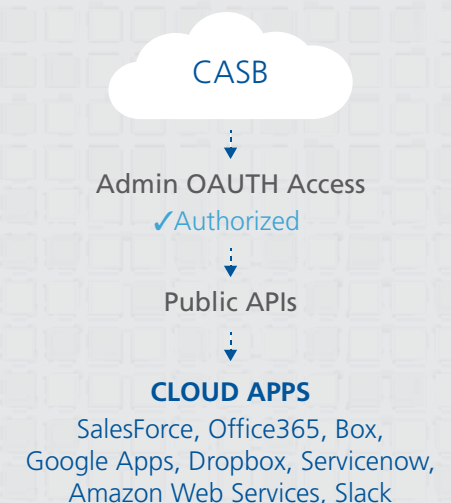

- + Review your current and future cloud initiatives
- + Identify areas of risk (known and unknown) across cloud application usage
- + Discuss your current security program and goals for the future
- + Explore CASB functions, features, and capabilities
- + How will a CASB function in my organization (Methods of Access)?
- + What's involved with performing a Cloud Application Risk Assessment?

### What are the expected outcomes of the Workshop?

## Top 4 CASB Benefits

- 1 Find and track all cloud apps and assess risk continuously
- 2 Gain visibility into your organization's cloud app usage and context continuously
- 3 Protect against malware, detect threats, and manage incidents more effectively
- 4 Prevent cloud data loss and improve protection

## NEXT STEPS

### Cloud App Risk Assessment

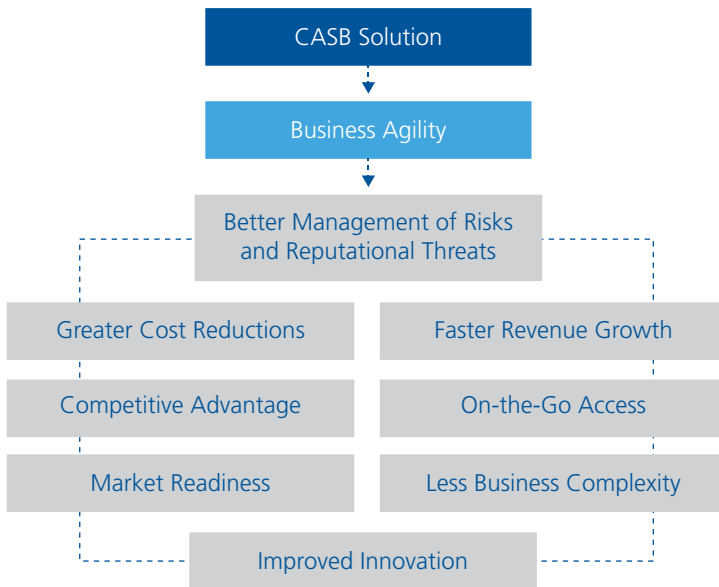

As a follow-up to the Cloud Usage & Risk Workshop, ePlus will perform a Cloud App Risk Assessment that provides visibility into the sanctioned and unsanctioned cloud applications in use, the risk associated with these applications, and a detailed risk analysis of the users and data within sanctioned cloud applications.

### What are the expected outcomes and agenda of the Cloud App Risk Assessment?

- + Discovered apps by category
- + Enterprise-readiness score and risk rating of discovered apps
- + App risk analysis
- + Data movement analysis
- + Sanctioned app analysis
- + Usage and activity analysis
- + Business concerns analysis
- + Risk analysis mapped to your organization's business concerns
- + Sensitive data exposure analysis
- + Sensitive data violation analysis

### What will ePlus deliver?

- + An overall solution for your organization based on the requirements and outcome of the Cloud Application Risk Assessment
- + A proposal that pairs solutions with software and professional services
- + Set expectations regarding roles and responsibilities

## What can a Cloud Usage & Risk Workshop do for you?

### GOVERN USAGE

Monitor privileged accounts and prevent unauthorized activity

Monitor or control users' activities within collaboration and social media without blocking those services

### SECURE DATA

Prevent data exfiltration from sanctioned to an unsanctioned service

Enforce different policies for personal and corporate instances of the same cloud service

Apply encryption based on conditional factors

### PROTECT AGAINST THREATS

Block or remediate malware

Detect and alert user login anomalies

### Schedule a workshop

Contact your local ePlus Account Executive today to schedule your Cloud Usage & Risk Workshop, or email [eplus-security@eplus.com](mailto:eplus-security@eplus.com)
