

Address Business Risk with a Strategic Security Assessment

Does your cyber security strategy align with your business and risk management needs? Do you feel confident it is providing adequate protection for your data and your brand? Do you have a consolidated framework in which to manage your security program?

ePlus is offering a Strategic Security Assessment (SSA), focused on understanding the unique security risks your organization has to manage and prioritizing those risks. We evaluate the maturity of any existing program against an agreed upon framework (such as CMM, ISO, NIST) and make recommendations, customized for your organization, that address your specific business and risk management needs.

What does the Strategic Security Assessment look like?

This assessment is an onsite session with your key internal stakeholders. The assessment aims to identify your business' most critical assets and gain an understanding of your company culture, enterprise risk exposure, and alignment to business needs while maintaining productivity and practicality expectations. Through a series of interviews conducted by our highly-skilled and experienced team of former CISOs/CSOs, we are able to:

- + Identify and prioritize enterprise risk exposure
- + Evaluate the current information security program and map existing controls to the gathered requirements, identifying gaps
- + Align the information security program to enterprise requirements
- + Determine specific mitigation and defense requirements

What will ePlus deliver?

- + A current state and recommended future state report on your information security program
- + A comprehensive, customized, prioritized roadmap of recommendations for updating or creating a strategic security program that will better protect your business
- + Access to ePlus subject matter experts

SCHEDULE TODAY!

Contact your local ePlus Account Executive today to schedule your Strategic Security Assessment, or email eplus-security@eplus.com
